

Gasket Replacement Tool

16 ¾" and 18 ¾" gasket removal

The gasket replacement tool is designed to function with many industry standard seals. To provide a better, safer and highly versatile tool each kit ships with multiple rubberised shoe sets allowing easy and simple interchange for a variety of seal types.

Operating the tool is easy, after selecting the correct shoe set the tool is carefully guided into place and the cylinder deactivated causing the tool to expand and securely grip the seal bore. Should hydraulic systems fail the tool will remain fixed safely to the seal preventing unnecessary component loss.

Applications

Gasket removal
Gasket replacement

Features

16 ¾" and 18 ¾" shoe sets supplied as standard
Rubberised edges protect gaskets
15kg / 33lbs in air

In the box
